3. LOGIN
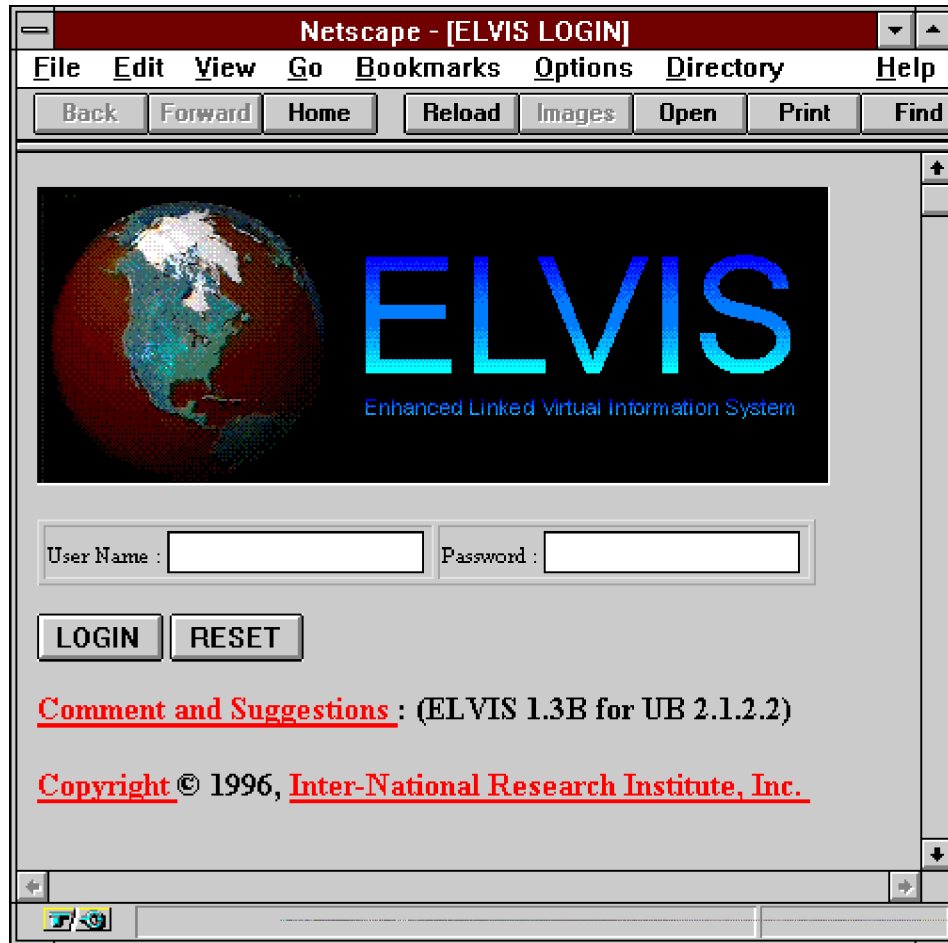

User login is required to monitor and control access to ELVIS and to provide the capability to build and recall custom maps for each user (100 custom maps are allocated per user). The system administrator assigns user accounts, which includes user name, login, password, parent command, code, telephone, and email address.

The screen below is the ELVIS login window. A user enters a login name and a password, and then clicks on the LOGIN button. Note that Netscape may not automatically move the cursor to the Password field after the login is entered. Use the [TAB] key or click on the password field to move the cursor to the password field. Also, the LOGIN button may not be activated by pressing the [ENTER] key, so the user must click on the LOGIN button. Different browsers have implemented the [ENTER] key in different ways, so the behavior will vary.

A "Comment and Suggestions" link is provided for user critique or accolades. A copyright statement and developer information are also provided.
